                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AP000686 68466 bp DNA linear HTG 30-MAY-2000

8 NOTE: This is a 'working draft' sequence. It currently
8 consists of 12 contigs. The true order of the pieces
8 is not known and their order in this sequence record is
8 runs of N. but the exact sizes of the gapes are unknown.
8 This record will be updated with the finished sequence
8 soon as it is available and the accession number will
8 be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Mapping information for this clone was provided by Dr. John D.
MCPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc NOTICE: This sequence may not represent the entire insert of this folore. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions. This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest. The RECI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanaes, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from and coworkers at http://www.resgen.com) or Pieter de Jong VECTOR: pBACe3.6

SOURCE INFORMATION:

```
The clone sequenced to the left is RP11-342I1; the clone sequenced to the right is RP11-328NB. Actual start of this clone is at base position 1 of RP11-21M10; actual end is at base position 174410 of RP11-21M10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /rpt_family="Alu"

It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

on Feb 5, 2001 this sequence version replaced gi:1265262.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw.; SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP, Information on the WORMPEP database can be found at PRI 02-FEB-2001 http://www.sanger.ac.uk/HGP/Chri3
FIL-223E19 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm VECTOR: PAAAC3.6
IMPORTANT: This sequence is not the entire insert of clone RPI1-223E19 It may be shorter because we sequence overlapping 113952 114060 114059 TTCTCTTATCCATTTGTCTATTGGGATTTTCATGTTTTCAATGGTATGATGATGATTTTTA 114000 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 62043) http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 102 103 AlaArgThrGluValAlaGlnLysIleValArgHisSerLeuLysProCysMetLeuGlu 122 62 AL161893 62043 bp DNA linear PRI 02-1 Human DNA sequence from clone RP11-223E19 on chromosome 13, 63 MetLysLeuSerSerGluSerLysAlaLysIleSerGluThrAlaCysGlyCysValAla Db 113999 CAGTTAGTGCTTGCAATCTCAAAAGCCAAAATTTCTACCAATGACTGT-------83 AspLysAlaProGluAlaValSerLeuThrGluLeuThrThrAlaAlaIleAsnProAsn .--LysileAlaAla 48 -----CysGlnThrGlnLeu: ------ThrGlyHis Mapping Group. Sequence divergence between the classes is due to single base substitutions and to duplications or deletions within or near direct repeats. There are more than a hundred copies of the gene encoding alpha 'Deta-gladin per haploid genome. Amplification or rearrangement of DNA does not occur during development, since
                                                                                                hybridization patterns are the same, whether DNA isolated from leaves or seeds is used.

Potential polyadenylation signals are present at 1017-1022 and

CDS are numbered using the following system eg L163.01. L163
(COSmid name). 01 (first CDS)
To make the cosmid library Leishmania major Friedlin DNA was
partially digested with Sau3AI prior to cloning into BamHI site of
the cosmid shuttle vector CLHVG (Ryan et al. 1993 Gene
131:45-150). The sequence of the packaged vector was determined by
Peter Myler and Ken Stuart at Seattle Biomedical Research
Institute, and is available as accession number US931.
The more significant matches with motifs in the PROSITE database
are also included but some of these may be fortuitous.
The length in codons is given for each CDS.
Usually the highest scoring match (cound by fasta -o is given for CDS which show significant similarity to other CDS in the database.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequencing project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton, Cambridge CBIO 15A, (E-mail: barrell@sanger.ac.uk) and GATC GmbH, Fritz-Arnold-Str 23, p-78467 Konstanz, Germany see http://www.ebi.ac.uk/parasites/leish.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the Hexamer program which was written by Richard Durbin as an integral part of the ACEDB-based analysis tools for the C.elegans Genome Sequencing Project. The program calculates the log-likelihood score for a given DNA segment based on the frequency of 6-mers, normalised for the base-pair composition of the genome. The program was trained using a fasta file of confirmed Leismania
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Where possible we choose an initiation codon (atg) which is preceded by a stretch of pyrimidines or part of a Kozak sequence. If this cannot be identified we choose the most upstream initiation
                                                                                                                                                                INV 23-JUN-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Details of leishmania sequencing at the Sanger Centre are available

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  93899
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     108818
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a working draft's sequence. It currently consists of 59 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                        Norley, K.C.                                                                            NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently consists of 64 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

In the sequence presented here a TATA box is located at positions 492-499 and potential poly-A signals at 1534-1539 and 1591-1596. Four P-boxes (containing many proline codons) are found at 758-793, 794-829, 830-868, and 869-904. The P-box presumably arose in the ancestral alpha/Deta-gliadin gene and was multiplied prior to the extensive multiplication of the whole gene. Every P-box is slightly different from every other. Two polyglutemine stretches reside at 941-994 and 1202-1224. In wheat DNA 'cg' and 'cng' sequences are over 80% methylated to m5c. An alternating purine pyrimidine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Summer-Smith, M., Rafalski, J.A., Suglyama, T., Stoll, M. and Soell, D.
